

# NISHANT ARORA

## Senior Software Engineer

Full-stack engineer with 6+ years across two stacks: Angular and .NET at Schwab, React and a TypeScript/Node.js backend at SecurityScorecard. Strongest on the front end and design systems, comfortable anywhere in the stack, and all-in on AI-assisted development.

✉ nish54@gmail.com 📞 (908) 864-3800 📍 Austin, TX 🌐 linkedin.com/in/nish1997 🐙 github.com/nishant

## EXPERIENCE

### SecurityScorecard

Senior Software Engineer, Titan product line

Mar 2026 – Present

Austin, TX · Hybrid

Full-stack on Titan, the vendor risk management product. Mostly front end and design system work, with backend changes (Node.js/gRPC, ClickHouse) when a feature needs them. 17 repos and counting.

- **Built the design token system for the Titan component library from the ground up:** DTCG-format JSON as the single source of truth, a custom generator that emits the Tailwind v4 @theme layer, and color primitives plus a semantic layer with light/dark theming. Wired it into the Vite build with CI guards for duplicate keys, theme parity and utility classes that emit no CSS, then migrated the core components (buttons, badges, tags, focus ring) onto it. Every Titan theme runs on it now.
- **Delivered Guest Access end to end across 5 services,** the product's first unauthenticated surface: a customer picks security findings and a vendor gets a short-lived, read-only link scoped to just those. Owned the guest session lifecycle and Cerbos authorization policy in the Node.js/gRPC users service, the single public Kong gateway route, the invitation emails, the unauthenticated React micro-frontend and the link TTL in Helm; verified all five security guarantees against a live local stack before release.
- **Made the platform's most-hit query 4.8x faster** (impacted companies for a security event) by re-keying the ClickHouse lookup tables behind it: env-var gated, bounded backfill parallelism, and a staged Helm rollout through stage, demo and production.
- **Built out the Security Events experience for vendor risk analysts:** event feed, detail pages, impact analytics (a new donut chart in the component library wired to the impacted-companies gRPC API), and the close/reopen, remediation and escalation workflows. Full-stack on several pieces: protobuf schema, ClickHouse read path, React UI with optimistic updates.
- **Rebuilt the findings filters for customers with thousands of vendors:** infinite-scroll async multiselect in the component library, a paginated gRPC endpoint with an org-scoped security guard, and the consuming UI. Prototyped a natural-language filter bar on the platform's agentic search service.
- **Core contributor to the org's AI-first engineering push.** Work runs through Claude Code (previously Cursor) with MCP servers for Figma, Jira/Confluence, GitHub, Slack and SonarQube. Built skills for the company-wide AI coding toolkit: a deep PR-review skill, a QA-planning skill, and a repo-sync skill that keeps protos, generated clients and yalc-linked packages current across repos. Authored the agent context (CLAUDE.md, AGENTS.md) for four repos.
- **Ship through Dark Factory,** the org's fully autonomous delivery pipeline: a groomed ticket goes straight to implementation with no human code review, so ticket quality is the whole game. Ran the epic audits that feed it. One caught a critical architectural gap (an email flow with no conversation record for three downstream stories to build on) before a line was written; another replaced six wrong tickets with ten correctly scoped, sequenced and estimated stories.

### Charles Schwab

Software Engineer (Associate → I → II → III)

Jan 2020 – Mar 2026

Austin, TX · Hybrid

Angular and .NET full-stack on Schwab Intelligent Portfolios and developer.schwab.com; standing role in the new-grad program.

- Ground-up rebuild of **Schwab Intelligent Portfolios** (\$90B AUM) on Angular 20 + .NET Core, using the Backend-For-Frontend pattern (SPA, Experience API, Capability API) with OpenAPI, hosted on Pivotal Cloud Foundry with Bamboo/Harness and GitHub Actions CI/CD at 97%+ test coverage. Maintained the legacy version in parallel and built its Highcharts chart-builder service.
- Single-handedly upgraded the SPA from **Angular 14 to 20** through four years of dependency drift.
- Built much of the UI for Schwab's public **Developer Portal** (developer.schwab.com) on Angular 9, .NET Core 3.1, MongoDB, Redis and Drupal, the API management platform where partners discover and integrate Schwab's APIs.
- Migrated content from a custom legacy CMS to **Drupal**, with a comparison tool that cut the Product Owner's legal-content validation from days to minutes.
- Onboarded thinkorswim into Schwab authentication via **Transmit Security** as part of the TD Ameritrade merger.
- Mentored 4 Associate engineers, wrote the interview set and interviewed **40+ new-grad candidates**, and redesigned the new-grad frontend bootcamp around Angular, Bootstrap and SCSS.

### Medocity Inc.

Software Engineer Intern

Oct 2019 – Dec 2019

Parsippany, NJ

## PERSONAL PROJECTS

**Nishboard** · Frameless Electron + React desktop dashboard for a second monitor: 20+ widgets (weather, Spotify, markets, hardware vitals, calendar, YouTube, Twitch, embedded Claude Code chat) on a draggable grid. Turborepo monorepo, Fastify backend, TanStack Query, Tailwind, GitHub Actions releases.

**Trading** · Options trading platform: Angular + NestJS with a Python quant sidecar, TimescaleDB and ThetaData market data. Vol surface fitting, realized-vol forecasting and a backtesting harness.

## SKILLS

### AI TOOLING

Claude Code Cursor  
MCP Servers Agent Skills  
Dark Factory

### LANGUAGES

TypeScript JavaScript C#  
SQL Ruby Java HTML / SCSS

### FRONT END

React Angular Tailwind  
Micro-Frontends (MFEs)  
TanStack Query Vite Storybook  
Highcharts ECharts i18n  
Accessibility (ARIA, axe) Bootstrap

### BACK END & DATA

Node.js gRPC / Protobuf  
.NET Core ClickHouse Postgres  
Kafka MongoDB Redis  
REST / OpenAPI Cerbos  
JWT / Session Management

### PLATFORM & DEVOPS

Kubernetes Helm ArgoCD  
Docker GitHub Actions Kong  
AWS S3 Cloud Foundry  
Bamboo Harness LaunchDarkly  
SonarQube Splunk

### TESTING

Playwright Jasmine / Karma  
Mock Service Worker (MSW)  
Cucumber Protractor SauceLabs

### DESIGN & PROCESS

Design Tokens  
Figma / Code Connect  
Scrum / Agile

## EDUCATION

### University of Maryland – College Park

B.S. Computer Science  
Minor in Film Studies  
Class of 2019

## CERTIFICATIONS

### Professional Scrum Master I

Scrum.org

### Splunk 7.x Fundamentals

Splunk

### MTA: Introduction to Programming Using Java

Microsoft
